

Integration with IBM InfoSphere Information Governance Catalog

YourDataConnect has developed a bi-directional solution to ingest metadata from IBM InfoSphere Information Governance Catalog (IGC) into YourDataConnect and ingest terms from YourDataConnect into IGC.

IBM InfoSphere Information Governance Catalog

IGC is a web-based tool that allows users to explore, understand, and analyze information. Users can create, manage, and share a common business language, document and enact policies and rules, and track data lineage. Figure 1 shows the parent category, business term, and related column in IGC.

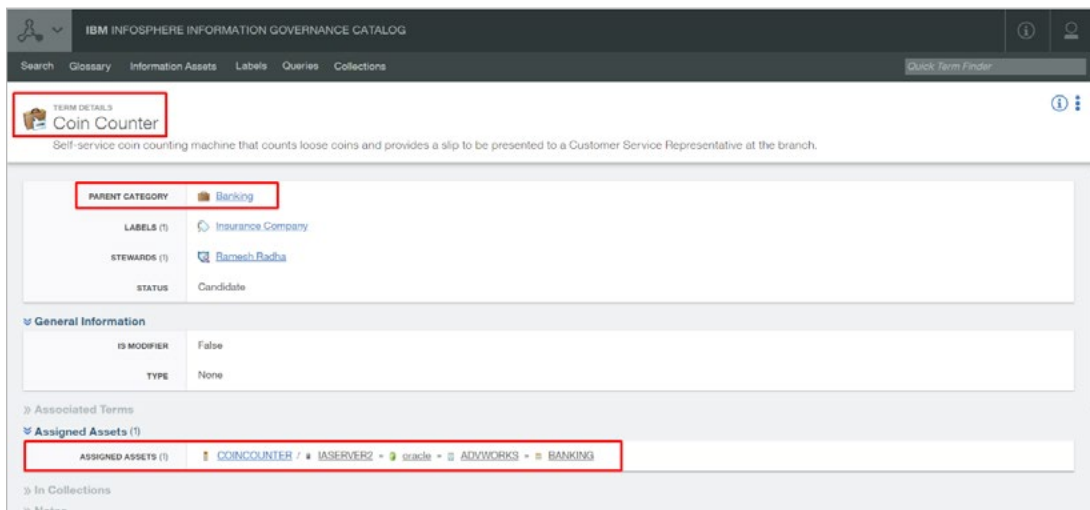

Figure 1: Parent category, business term, and related column in IGC.

Figure 2 shows the database, schema, table, and column in IGC.

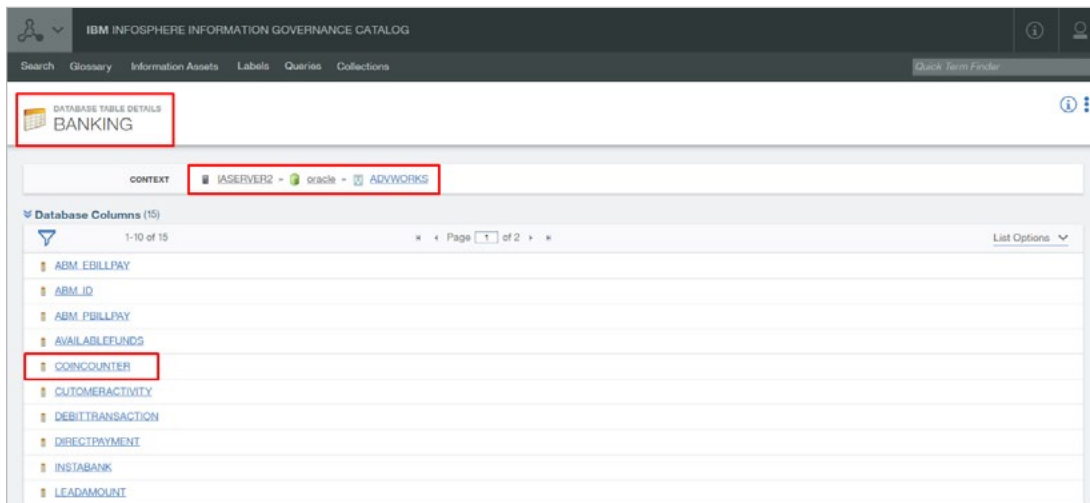

Figure 2: Database, schema, table, and column in IGC.

Integration of IGC with YourDataConnect

YourDataConnect has developed a solution to import category, business term, database, schema, table, and column metadata from IGC while maintaining the hierarchy between the IGC objects (see Figure 3).

Integration of YourDataConnect with IGC

YourDataConnect has developed a solution to import approved business terms and the related glossary into IGC and update the business terms and glossary of YourDataConnect with the IGC ID and URL. Figure 4 shows the approved business term and related glossary in YourDataConnect.
